CSCE 3701 · TEAM CLOSET · MILESTONE 2 FINAL · BUILD V1.6

Demo script · 13 steps

About 5–7 minutes. Start from a fresh seed (see the preflight). The recorded backup `Closet_Demo_FINAL.mp4` follows the same 13 steps (5:33).

#	Step	Expected
1	**Home**	Today's look, 30 °C (estimate), Closet noticed (≤ 2 notices), **Wardrobe status** with clickable counts: 3 in laundry, 1 borrowed (rose wrap dress, overdue), 1 packed, 1 needs repair (camel cardigan)
2	Closet → Navy blazer → **In laundry** → Care → Laundry → **Wash done**	It appears in the basket, then Available again
3	Black blazer → More actions → **Repair / Alter** → Needs alteration "Sleeves too long" → **Send to tailor** (Hany Tailoring, back today) → Care → Repairs & alterations → Style me → Work → **Mark collected**	AT TAILOR "should be ready today"; the black blazer is in **none** of the three Work looks; after collecting it is Available
4	Black blazer → **Lend item** → Nour, due in 5 days → Borrow & lend → **Mark returned**	Borrowed everywhere; the rose wrap dress shows as overdue; after return the loan stays in History
5	**Style me → University → 3 looks** → click a top	**Campus Stripes · Clean Oxford · Relaxed Midi** (any two share ≤ 1 major garment); the tray changes only that piece
6	**Try on**	Label "Virtual Try-On Preview": a simulated overlay
7	Home → Still love it? (**denim jacket · 104 days**) → Style it → **Donate** → Donation → navigate away → **Mark as donated**	Three looks with the jacket; Ready to donate waits under Donation; after Mark as donated it is gone, history kept, **no replacement** in the Shopping bag
8	**Packing** → Alexandria, 2 days, carry-on → **Mark as packed**	A capsule that reuses pieces; every piece shows Packed in the Closet
9	**Shopping → Do I need this?** Shoes · White · "loafers", then Top · Black · "fitted top"	White loafers → **Good buy** (five blocks: new combinations, similar owned, gap, occasions, recommendation); black fitted top → **Skip**, you already own a similar one; nothing is added
10	**Planner** → weather alert → **Adjust outfit**	"24 °C → 30 °C … the planned blazer may be too warm" → only the blazer changes
11	**Analytics** → Wardrobe Health, Cost per wear, Outfit memory "Salma"	Health raising / lowering; only confirmed wears count; Salma's birthday with Wear again · Create a variation
12	**Ask Closet**: "What needs repair?" · "Who has my rose wrap dress?" · "What clothes are ready to donate?"	"Camel cardigan needs a repair: loose button" · "with Nour for 12 days (expected back Sat 24 Oct)" · "Nothing is waiting to be donated"
13	**Home**	Reflects every change (30 pieces: the denim jacket was donated)

> **Scenario note (honest).** The brief asked to simulate **black** loafers. The seed closet already owns black loafers, so Closet correctly answers "Probably unnecessary" for them. The demo therefore uses **white** loafers as the useful purchase and the black fitted top as the near-duplicate.

What we say

- Try-On is a simulated preview, not generated imagery.
- Ask Closet: keyword parser, 35 whitelisted functions; the language model is optional and off.
- Weather: the seasonal estimate. Closet is not connected to charities or tailors — Care and Donation keep the closet accurate.
- Deployment: “Render blueprint configured; the local demo is the verified presentation path.”
